

The group "Theory of Neural Dynamics" at the MPI for Brain Research is looking for Master Students, PhD Students and Postdocs

Applications are invited from students and postdocs interested in understanding how neuronal networks work, how they respond to stimuli and what role connectivity and single neuron dynamics play for the activity of the brain. Though the focus of my research is on the theory side, my lab has close ties to experimentally oriented labs and projects could include both theory and experiments. We are looking for motivated and hard-working new group members with a life-science or quantitative background (physics, math, biology etc).

For more information, please contact Dr. Tatjana Tchumatchenko via email tatjana.tchumatchenko@brain.mpg.de
